Design Project Estimation Tool (DPET) – Dramatically Improves Your Engineering Project Time Estimation Accuracy

San Jose, CA – July 2004 – Design Visionaries, Inc., provider of top quality mechanical engineering and CAD services, is proud to introduce its Design Project Estimation Tool (DPET). DPET is an engineering tool created to minimize the differences between predicted and actual project times even for your most difficult engineering projects. Through DPET, we have captured what our experience has shown are the critical determinants of modern design-project schedules.

DPET created by the Design Visionaries team takes into consideration various inputs to engineering projects, such as the user skill level, number of parts to be designed, part and assembly drawing requirements, additional part fabrication, prototype and de-bug requirements and more. DPET accomplishes what has become much more important in recent years – the accurate time analysis of the CAD task associated with challenging engineering projects. “CAD is a huge multiplier of all the good and bad that engineers do, the difference between estimated time and actual time has the potential to be much greater than ever before. The problem is exacerbated by the fact that many of the people who quote jobs are not necessarily experienced CAD users. Our ‘Design Project Estimation tool’ or (DPET) is an effective solution to this problem”, says Stephen Samuel, president of Design Visionaries.

With over a 100 years of combined CAD experience, the Design Visionaries team members have become experts at applying high-end computer aided design to many of the most difficult design engineering challenges available. Through the engineering consulting projects that have been entrusted to Design Visionaries, the team has worked in the fields of aerospace, medical, automotive, industrial, consumer products and other fields. The world’s top design firms, who are enabled improvement of all phases of their design process after graduation from our UG and ProE courses, continue to choose Design Visionaries as a Unigraphics and ProEngineer mentor for their engineers.

DPET is available for use at the Design Visionaries Goodies Page http://www.designviz.com/Designer_goodies.htm. Please refer to the top of the “Goodies” Page. A CD-version of DPET is available for \$39.00 by contacting Design Visionaries at (408) 997-6323. We may customize DPET to reflect your specific project requirements. For more information regarding DPET and Design Visionaries, Inc. log on to www.designviz.com or contact us at (408) 997-6323.
